The polypeptides and nucleic acid are useful as pharmaceuticals, for diagnosis of and as antigens for vaccination against TB caused by Mycobacterium tuberculosis, africanum or bovis. The polypeptides are also useful for diagnosing ongoing or previous sensitization in an animal with bacteria belonging to the tuberculosis complex. The invention also describes the use of CFPTA or CFP30A or a T-cell epitope of for the induction of a strong immune response in a mammal; use of CFPTB, CFP19 or MPTS-SARTG or a T-cell epitope of for diagnosis of TB in a mammal by performing a DTH type skin test; use of CFP27, CFP30A, RD1-CRF2, RD1-CRF3, RD1-CRF3, RD1-CRF3, RD1-CRF3, CFP30B, CFP10A, CFP16, CFP16, CFP23, CFP23B, CFP30B or a T-cell epitope of for the preparation of an immunological composition; and for the preparation of a subunit vaccine

Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing
                                                                                                                                                                                                                                                                     04-JUN-1999;
                                                                                                                                                                                                                                                                                                                         13-MAY-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                               Acinetobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Acinetobacter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-NOV-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADA33271;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADA33271
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 17;

The present sequence represents the amino acid sequence of an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New

The method comprises: providing a ccell that comprises a quorum sensing controlled gene (ADS1446-ADS14798), cc where the cell is responsive to a quorum sensing signal molecule such cc sensing signal molecule in the presence and absence of a test compound; cc and detecting a change in the detectable signal. The method and modulator cidentified by the method are useful for treating a biofilm-associated cc disease or disorder, e.g. cystic fibrosis, AIDS, middle ear infections, canne, periodontal disease, catheter-associated infections, and medical controlled protein, used to illustrate the invention. Note: The sequence cc data for this patent was obtained in electronic format directly from WIPO cat figure in the present sequence is a quorum sensing controlled protein, used to illustrate the invention. Note: The sequence cc data for this patent was obtained in electronic format directly from WIPO cat figure is a protein published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Proteins AAW31304-W31307 represent the open reading frames (ORF's) 1-4 encoded by the gene cluster phz1, phz2, phz3 and phz4 involved in phenazine biosynthesis. Phenazines remarked trirogen-containing heterocyclic compounds with a common planar aromatic tricyclic structure. It has beer proposed that phenazine antibiotic function arises from the formation of intercalative complexes with DNA interfering with DNA metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transgenic plants containing such antipathogenic genes should have enhanced resistance to attack by phytopathogens. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protecting plants against pathogens with genetically transformed biological control agent - which expresses all polypeptide(s) involved in pyrrolnitrin biosynthetic pathway.

                                                                                                                                                                                                                                                                                                                                                                       cc enzyme required in the biosynthetic pathway of pyrrolnitrin. The DNA and Cc host cells transformed with it are useful for the production of transgenic plants with protection against phytopathogens. The enzymes are cc transgenic plants with protection against phytopathogens. The enzymes are part of a biosynthetic pathway producing plant antipathogenic substances (Aps). The compound ultimately produced by the pathway, pyrrolnitrin, is celectron transport and causes general lipoprotein damage. The transformed cells can additionally be used in compositions to be applied to plants to provide resistance, as can purified Aps produced by them. Transgene cc dependent resistance eliminates the need to spray crops with chemical based pesticides and antibiotics, which is expensive and time consuming, and in addition, especially in the case of antibiotics, their over use cleads to resistance. In addition, transgenic production of these enzymes covercomes problems of applying micro-organisms which can be slow growing and isolated in their growth areas. (Updated on 17-OCT-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prnD enzyme catalyses the conversion of aminopyrrolnitrin to pyrrolnitrin. Pyrrolnitrin has antibiotic activity, and inhibits a broad range of fungi. It is a fungal respiratory electron transport inhibitor. The genes are useful for developing a host as a biocontrol agent, for protecting plants against a pathogen and for producing large, uniform amounts of pyrrolnitrin. The genes are also useful for producing transgenic plants that express antipathogenic substance (APS) biosynthetic genes. The genes and enzymes are useful for increasing the resistance of host plants to disease caused by phytopathogens, e.g. fungi, bacteria or nematodes. The microbial hosts are useful for controlling or inhibiting the growth of a phytopathogen. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ligon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   -chlorotryptophan. The PrnB enzyme catalyses the conversion of 7-chlorotryptophan to monodechloroaminopyrrolnitrin. PrnC enzyme cataly the conversion of monodechloroaminopyrrolnitrin to aminopyrrolnitrin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene region. The specification describes pyrrolnitrin gene regions. This region encodes enzymes required in the biosynthetic pathway of pyrrolnitrin. The PrnA enzyme catalyses the conversion of tryptophan to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pyrrolnitrin biosynthesis genes and enzymes, useful for producing pyrrolnitrin for increasing plant resistance to phytopathogens, efungi or nematodes, and for developing microbial hosts useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   biocontrol agents.

The amino acids produced can be lysine, glutamine, glutamine, aspartate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleucine, arginine, proline, histidine, tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium diphtheriae. (I) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or Brevibacterium. The HA proteins encoded by the (I) are used to maintain homeostasis in C. splutamicum or help the microorganism to adapt to different environmental

The C. albicans nucleic acid molecules encoding the polypeptides of the invention may be used as probes and primers for detecting homologous nucleic acid molecule sequences. The polypeptides and nucleic acid molecules and compounds identified as selectively modulating the expression of the polypeptides, may be used as medicaments or for the preparation of a medicament to treat C.albicans associated diseases, especially in AIDS patients and to treat vulvovaginitis in otherwise healthy females. The use of the polypeptides and polynucleotide sequences to treat C.albicans associated diseases has fewer side effects and less toxicity than previously used methods such as the use of amphotericin. This method is therefore especially suitable for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 302

The sequences are useful in diagnosis and therefore therefore the sequences are useful in diagnosis and the therefore the sequences are useful in diagnosis and the therefore the sequence are useful in diagnostics, prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences AB067826-AB084396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html

                                                                                                                                                                                                                                                                                                                                       and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes Antibodies (Ab) raised against the polypeptides encoded by the genes are used for detection/identification of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful therapsutically (to treat microbial infection by bacteria or fungi that are sensitive to P. luminescens-encoded toxins or antibiotics) and as biopseticides. Other uses of the genes and the proteins are as virulence factors and for identifying targets of human diseases for which P. luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Pseudomonas aeruginosa polypeptides and the polymucleotides encoding them. The sequences are useful in diagnosis and the therefore therapy of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, cincluding anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused confection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-confection of Psecies using biochip technology. Sequences ABO67826-confection but was obtained in electronic format from USPTO at specification but was obtained in electronic format from USPTO at sequence.

The invention relates to Pseudomonas aeruginosa polypeptides and the copymucleotides encoding them. The sequences are useful in diagnosis and control of the relations as molecular targets for diagnosis and comply of pathological conditions, as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from a compound, such as a polypeptide, of the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs, as templates for recombinant components for diagnosis and/or treatment of P. aeruginosa caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences AB067826-NB084396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
